

Flush accessory – Flush flange

Design description

The flush flange is made of bar stock or forged material. The flange contains one or two flush holes. The flush holes can be selected in most common sizes. The biggest advantage of the flush flange is the easy positioning and alignment of the parts. All kind of facings are available on the flush flange.

Flush flange materials

The flush flange can be made in several materials. In the table below is a selection of materials.

Material		
tradename	UNS	Wst.
AISI 316(L)	S31603	1.4404
AISI 304L	S30400	1.4306
AISI 310 MoLn	S31050	1.4466
AISI 316 UG	S31600	1.4435
AISI 321	S32100	1.4541
AISI 904(L)	N08904	1.4539
Alloy 20	N08020	2.4660
Alloy 400	N04400	2.4360
Alloy 600	N06600	2.4816
Alloy 625	N06625	2.4856
Alloy 825	N08825	2.4858
Alloy B2	N10665	2.4617
Alloy C-22	N06022	2.4602
Alloy C-276	N10276	2.4810
Duplex F44	S31254	1.4547
Duplex F51/F60	S32205	1.4462
Duplex F53	S32750	1.4410
Duplex F55	S32750	1.4410
Nickel 201	N02201	2.4068
Titanium Gr. 2	R50250	2.7025
Zirconium 702	R60702	-

Size	Rating	Type	Roughness
DN25 to DN100	10-20K	RF	Ra 3.2-12.5 µm

Material Certification

Material traceability and related certification are applicable for all process wetted parts. Material certification possibilities depend on the type of flange, the assembly construction and the materials used. Material certification is in accordance with EN10204 3.1.

Additional material certification and testing can be provided on request, such as Positive Material Identification (PMI), Intergranular corrosion (IGC) testing, material certification in accordance with EN10204 3.2, NACE conformity for ISO-15156 (MR-0175) and/or ISO-17945 (MR-0103), NORSOK M-630 and many more.

-> Please note that the responsibility for material selection always rests with the user.

Flange Marking & Traceability

All flush flanges are marked by the forging shop with heat number, material designation, size, and rating. Badotherm adds a Badotherm reference number and the manufacturers name to the flange for traceability purposes.

Flanges and origin

The flush parts are made from forged materials according to the applicable standards. The standard sourcing of flanges is of international origin. Optionally regional preference can be requested, for example materials from EU origin.

Cleanliness of the wetted parts

All parts are standard cleaned from excessive oil and grease. When additional requirements are needed, the parts can be cleaned according customer requirements and cleaning specifications.

Gaskets

Sizes of the diaphragm area are designed to match the gaskets used between the process and seal or flush flange. For the ASME B16.5 RF flanges the ASME B16.20 is used for dimension restriction to ensure both the spiral and grooved gaskets are fully supported by the serrated area. For the EN type B1 flanges the gasket dimensions are matching the sizes of the EN 1514-2. The size "A" in the tables refer to the start of the gasket surface.

Flush connections

Flush ports can be made in all kind of variations both threaded as weld connection.

Flush size	following standard
G ¼", G ½", G ¾"	ISO 228 thread (acc DIN 3852-2 / ISO 1179-4)
¼", ½", ¾" NPT	ASME B1.20.1
Butt weld ½" / 20mm	ASME B16.9 / EN 12627
Butt weld ¾" / 28mm	
Socket weld ½"	ASME B16.11 / EN 12760
Socket weld ¾"	

Assemblies

The flush flanges are typical used for vent or drain the process when installed under a pressure instrument like a pressure gauge or pressure transmitter. Venting the process can be made easy by installing a needle valve, extension pipe or welding neck flange to the flush flange. These assemblies are common practice for Badotherm and can be welded, tested and assembled in advance.

Pressure testing

All assembled flush flanges are pressure tested. The methods are described below.

Standard testing

In line with the EN 12266-1 each sealing point will be 100% tested with leak detection fluid under standard test pressure. The test medium is a gas. At leaking point, after application of the leak detection fluid, bubbles become visible. This bubble detection method can detect leak rates of approximately 1×10^{-3} mbar l/s. Assemblies of flush flanges with plugs or valves are leak tested by this method. During the leak test all fittings and welds are tested at 6 bar for 30 seconds after application of the leak detection fluid.

Optional test method

Additionally to the standard method the assemblies of and flush flanges combined with plugs or valves can be tested at customer determined pressure values with a maximum of 150% of the MWP. The 6 bar of air in the standard method will be changed to the customer value of 150% of the MWP. Above 150 bar the test medium will be changed from gas to liquid.

Flange thickness

Thickness of the flush flange is depending on flush hole size and facing height. The dimensions tables are based on ½" flush connections. For ¼", ¾", BW, SW connection below rules can be followed.

Flush size (C1)	RF /B1 facing	RJF facing
¼"	B = 20.0 + 2*f	B = 20.0 + 2*E
½"	B = 35.0 + 2*f	B = 35.0 + 2*E
¾"	B = 40.0 + 2*f	B = 40.0 + 2*E
Butt weld ½" / 20mm	B = 24.0 + 2*f	B = 24.0 + 2*E
Butt weld ¾" / 28mm	B = 30.0 + 2*f	B = 30.0 + 2*E
Socket weld ½"	B = 33.5 + 2*f	B = 33.5 + 2*E
Socket weld ¾"	B = 41.0 + 2*f	B = 41.0 + 2*E

Assemblies

The flush flanges are typically used for vent or drain the process when installed under a pressure instrument like a pressure gauge or pressure transmitter. Venting the process can be made easy by installing a needle valve, extension pipe or welding neck flange to the flush flange. These assemblies are common practice for Badotherm and can be welded, tested and assembled in advance.

Orientation

Mounting flush devices vertical or horizontal can result in difficulties in orientation. There are two main positions of the valve operating handle.

Position 1: this is the default position of the valve and most commonly used in vertical setup. This way the valve faces forward for easy operating.

Position 2: The valve handle are rotated 90° so the valve handles are facing forward in case of horizontal assembly.

Flush connection mounting	
Open ports ◀	OP
Blind plug	BP
Vent plug	VP
BDTV910 needle valve 1/2" NPT-f ^{*3}	V910-N12F
Fitting method	
PTFE tape	P
Grafoil tape	G
SWAK®	S

SWAK® is a trademark of Swagelok

*1: For size ≥DN100

*2: Other facings then RF/ RJF, fill in facing code from table 1.

*3 Select female connection of valve from table 3

Table 1: Additional Facing

Description	code
Large Male Face	LMF
Small Male Face	SMF
Flat Face	FF
Large Tongue Face	LTF
Small Tongue Face	STF
Large Groove Face	LGF
Small Groove Face	SGF
Large Female Face	LFF
Small Female Face	SFF

Description	code
Flat Face	A
Raised face (smooth finish)	B2
Tongue	C
Groove	D
Spigot	E
Recess	F

For the Groove and Tongue Facings the instrument and process and side are the opposites (eg Instrument side is LTF then Process side is LGF)

Table 2: Options

Option (start options with X_)	code
Cleaned from Oil and Grease	_K1
NACE ISO 15156 (MR 01 75)	_N75
Position 2 mounted valves	_VP2
3.1 material certificate	_IC31
2.1 Pressure leak test certificate standard pressure*1	_LTPS
2.1 Pressure leak test certificate acc PED 2014/68/EU*1	_LTCE
2.1 Penetrant test certificate*2	_PT1
2.2 Positive Material Identification	_PMI
2.2 Welding documents (WPS/PQR)*2	_WPS

*1: For fitted and welded accessory

*2: Only for welded accessory

Table 3: Options

BDTV910 with...	
G 1/4 female connection	BDTV910_G14F
G 3/8" A female connection	BDTV910_G38M
G 1/2 female connection	BDTV910_G12F
1/4" NPT female connection	BDTV910_N14F
1/2" NPT female connection	BDTV910_N12F
3/8" tube Compression fitting	BDTV910_CI38

Change log

Date	Change
30-3-2020	1.5" cl 2500 dimension "P" in RJF changed. / Valve coding table 3 added
8-3-2021	Updated ASME dimensions table with ASME 16.5:2020

Holland – Romania – India – Thailand – Dubai – USA
