# Three valve manifold series direct and remote mount

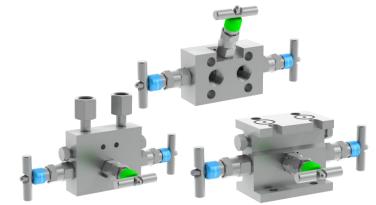

#### **Design description**

Badotherm three valve manifolds can be used for isolation, calibration and testing of differential pressure instruments. The manifolds can be directly mounted to the pressure instrument, or remotely mounted with pressure tubing. Depending on the type, the 3 valve manifold can be supplied with or without a purge connection. All Badotherm manifolds are standard stainless steel and optional available in exotic materials, such as Alloy C276 and Alloy 400. This manifold has a non-rotatable conical tip to ensure perfect alignment. Badotherm manifolds are manufactured within the European Union.

#### Valve assembly

The valves spindle assembly is build up from various parts. All nonwetted parts are made from AISI316(L). All wetted parts are matching the body material. The bonnet is locked with a locking pin to the main valve body. The spindle has a safety back seat that prevents that the spindle can be removed accidently.

**BADOTHERM®** 

Materials of	Construction
Component	Material
Handle bar	AISI 316(L)
Handle locking nut	A2-70
Dust cap	Aluminium
Gland locking nut	AISI 316(L)
Gland	AISI 316(L)
Compression ring	AISI 316(L)
Packing set	PTFE or Graphite
Locking pin	AISI 316(L)
Lubricant	Silvermark / Krytox 8908 (oxygen service)
Purge plug ◄	
Bonnet body◀	
Manifold body <	Watted parts (See selection table)
Main gasket <	Wetted parts (See selection table)
Spindle	
Spindle tip <	
are wetted parts	

Other materials then mentioned in the selection table are possible. Contact Badotherm for more information and posibilities

#### Bonnet packing

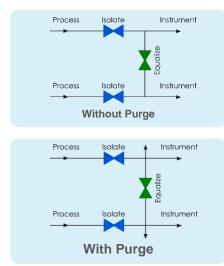

The valve bonnet contains the main packing set. This packing set is PFTE or Graphite material. PTFE Packing set can be used from -40 °C up to 260°C where the Graphite can be used between -40°C up to 538°C. Packing adjustment may be required during the service life of valves.

#### **Operating handle bar**

The operating handle is big enough to operate the manifold under pressure. Optionally the anti-tamper construction is available. Valves that have been cycled for a period of time may have a higher initial actuation torque.

#### Flow

The flow direction is marked on the body. The flow symbol on the product is:

### **Color coding**

The spindle of the valve is color coded. The isolation valves are colored with a blue anodized aluminum dust cap marked "ISOLATION". The equalizing valve is colored with a green anodized aluminum dust cap marked "EQUALIZING".

### **Purge ports**

The three valve manifold can be selected with ith a ¼" NPT purge port. The purge port is standard blocked with a vent plug in same material as the wetted parts. The purge ports can be used for external draining or the connection of an external pressure source for testing and calibration of the pressure instrument. The purge port is not blocked by a valve and thus can contain pressure. After the isolate valves are blocked.

### Cleaning

The manifolds are all dried and cleaned after testing. For special service such as oxygen service the manifolds are assembled, tested and packed in a special area. The packing of the manifold is in a double plastic sealed bag with a clear label and individual box. This option is only possible in combination with a PTFE packing in the bonnet.

### Marking

The marking on the manifolds is containing all relevant information needed for determining the function and material as mentioned in the MSS SP-25. The marking on the body contains the manufacturer, model, threads, traceability information, material designation, operating pressure, functional diagram and flow direction.

#### MV 7003 5<sup>th</sup> of July 2021

#### **Pressure test**

All manifolds are tested in the factory according the EN12266-1 (P10, P11, P12) and MSS SP-61. This means that the manifolds have undergone a shell test at  $\geq$ 1.5x the MWP and a seat test at  $\geq$ 1.1x the MWP, both at +/- 20°C. More information on test media and process can be found in the general datasheet "pressure testing"

## **Certification & Declaration of Conformity**

A 3.1 Inspection certificate according the EN 10204 is available on the body material.

A 2.1 conformity certificate according EN 10204 can be supplied a a conformation for the pressure test.

Additional certification and testing can be provided on request, such as Positive Material Identification (PMI), NACE compliance certificate and many more.

# Standards used

Design Standards	
Standard	Description
ASME B16.34	valves - flanged, threaded and welding end
ASME B31.1	power piping
ASME B31.3	process piping
ASME B1.20.1	pipe threads, general purpose
MSS SP-99	valves for measuring instruments
IEC 61518	Mating dimensions between differential pressure (type) measuring instruments
Test Standards	
Standard	Description
EN12266-1	pressure tests, test procedures and acceptance criteria for industrial valves
MSS SP-61	pressure testing of valves
ISO 5208	pressure testing of metallic valves with leakage rate A
Marking Standards	
Standard	Description
MSS SP-25	Marking on valves
Material Standards	Description

Standard	Description
NACE MR0175/MR0103 ISO 15156	use in H <sub>2</sub> S-containing environments in oil and gas production
NORSOK M-630	specification for use in pipelines
ASTM standards	Material specific standards

Certification Standards	
Standard	Description
EN 10204	Inspection documents

# **Pressure – Temperature limits**

The manifolds are limited by pressure and temperature based on the materials used and the packing set materials.

### Standard execution

Packing material	Pressure vs temperature		
PTFE (High Pressure)	690 bar at 38°C	10.000 psi at 100 °F	
PTFE	420 bar at 38 °C	3000 psi at 100 °F	
FIFE	276 bar at 204 °C	4000 psi at 400 °F	
Oronhito	420 bar at 38 °C	6000 psi at 100 °F	
Graphite	209 bar at 538 °C	3000 psi at 1000 °F	

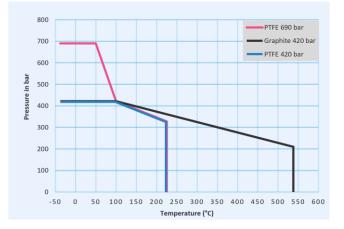

#### ASME B31.1 execution

Body material	Pressure vs temperature				
AIGI 246/2461	420 bar at 38 °C	6100 psi at 100 °F			
AISI 316/316L	209 bar at 538 °C	3000 psi at 1000 °F			
All 400	345 bar at 38 °C	5000 psi at 100 °F			
Alloy 400	173 bar at 475 °C	2500 psi at 885 °F			
Alloy 276	430 bar at 38 °C	6100 psi at 100 °F			
	237 bar at 425 °C	3500 psi at 800 °F			
Note: Pressure rating based on cl 2500 ASME B16.34					

#### Cleaned for oxygen purpose execution

Packing material	Pressure vs temperature				
PTFE	420 at 60 °C	6000 psi at 140 °F			
	90 bar at 200 °C	1305 psi at 392 °F			

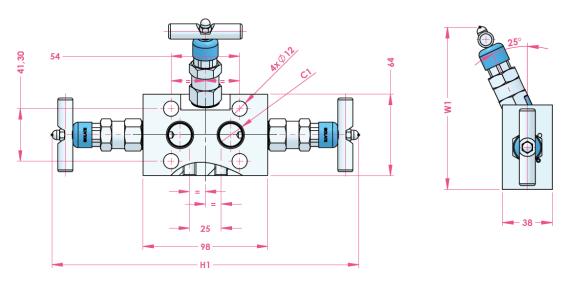

Low temperature limits are -40 °C for both PTFE as graphite gasket

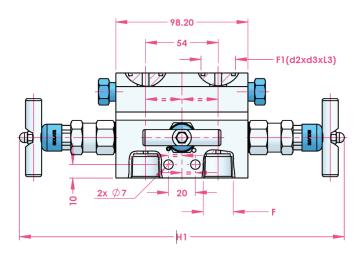

# **Direct mount series**

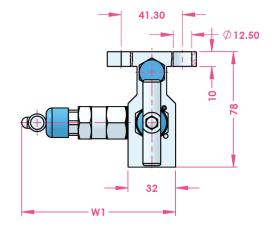

# ½" NPT female threaded x flanged IEC 61518-B

Specifically designed to fit DP pressure transmitters (Compact design) Model Type 931

C1 (process)	H1 (open)	W1 (open)

All dimensions in mm								

## **Remote mount series**

F (process)	F1 (Instrument)	H1 (open)	W1 (open)
½" NPT female		240.0	101.0
All dimensions in mm			

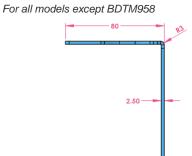

#### **Mounting kit options**

Typical assembly of the manifolds are with differential pressure instruments both electronic as a mechanical dial gauge like the BDT13. Especially the manifolds mounted directly to electronic pressure instruments using the IEC 61518 connection needs some specific parts for mounting like gaskets and bolts.

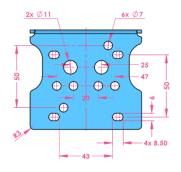

#### **Bracket sets**

Most manifold and valves have the possibility to be mounted to a bracket in order to fix it to a 2" pipe when required. The brackets are supplied with U-bolts, washers, hexagon nuts, and screws and washers to mount the valve to the bracket. The size and quantity are depending on the type of bracket.

# 90° bracket

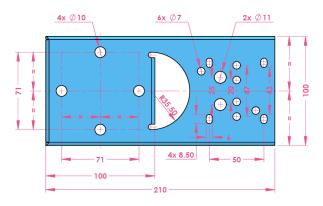

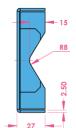

# Straight bracket

For all models except BDTM958
